

## **KXRB5 Series**

### Accelerometers and Inclinometers

#### **FEATURES**

Very Small Package - 3x5x0.9mm LGA

Low Power Consumption

Multiplexed Analog or Digital SPI Interface

Internal 1KHz Low Pass Filter

Ultra Low Noise Density

Lead-free Solderability

**Excellent Temperature Performance** 

High Shock Survivability

User Definable Bandwidth

Factory Programmable Offset and Sensitivity

A/D Converter and Auxiliary Input to Multiplexer

Self-test Function

### **MARKETS**

### **APPLICATIONS**

Personal Navigation Devices

Inertial Navigation and Dead Reckoning

Cell Phones and Handheld PDAs

Gesture Recognition

Game Controllers & Computer Peripherals

Inclination and Tilt Sensing

Ultra-Mobile PCs/Laptops/Hard Disk

Free-fall Detection

Cameras and Video Equipment

Image Stabilization

Sports Diagnostic Equipment/Pedometers

Static or Dynamic Acceleration

#### PROPRIETARY TECHNOLOGY

These high-performance silicon micromachined linear accelerometers and inclinometers consist of a sensor element and an ASIC packaged in a 3x5x0.9 mm Land Grid Array (LGA). The sensor element is fabricated from single-crystal silicon with proprietary Deep Reactive Ion Etching (DRIE) processes, and is protected from the environment by a hermetically-sealed silicon cap at the wafer level.

The KXRB5 series is designed to provide a high signal-to-noise ratio with excellent performance over temperature. These sensors can accept supply voltages between 2.5V and 5.25V. Sensitivity is factory programmable allowing customization for applications requiring from 1.5g to 6.0g ranges. Sensor bandwidth is user-definable. The auxillary input to the A/D converter and multiplexer minimizes the need for external A/D converters.

The sensor element functions on the principle of differential capacitance. Acceleration causes displacement of a silicon structure resulting in a change in capacitance. An ASIC, using a standard CMOS manufacturing process, detects and transforms changes in capacitance into an analog output voltage, which is proportional to acceleration.

### Accelerometers and Inclinometers

### PERFORMANCE SPECIFICATIONS

The performance parameters below are programmed and tested at 3.0 and 3.3 volts respectively. However, the device can be factory programmed to accept supply voltages from 2.5 V to 5.25 V. Performance parameters will change with supply voltage variations.

| PERFORMANCE SPECIFICATIONS |                     |                       |   |           |  |  |  |  |  |
